

Looking into how spaces can be flexible, the reduction of energy system, and what makes a good neighbour hood vibrant through neighbourhood Amenities, it has come to term that the modern society have transformed into indoor people due bigger homes and frustration with transport. How can this lifeless neighbourhood society be reversed?

Through mixed mode of private and public space usage, this housing proposal will be a physical barrier free housing for the non-able bodies. Through constant interaction with public and private with proposed commercial programs and the outdoor activities, there will be opportunities for people to interact with new people and the surroundings.

Research shows that the employment rate is on a small climb, but still low due to travel and social problems due to them being disadvantage within society. They can't afford the time and money. With no official housing dedicated entirely to the physical impaired community, this opportunity allow people to gather and communicate and support each other as a one.

The developer funding a Community/charity, through money he earns from parking, commercial leasing etc The Community's aim in to raise awareness of their disadvantage and by helping them fund part of their living. The Community/charity conducts fete, carnivals as well as carer shops. Carer shops are necessities for some; therefore it allows the money flow to circulate in this housing facility. The community acts as a social interaction between the public and private, raising popularity for Frog Hollow Park as well the housing department through fete activities. They are open to donation, raising awareness of non-able body within our society today.

The majority are working part time, this allows the resident to help put the community, and getting the recognition they desire.

There are opportunities for people to live with their family through mixed usage of combining two units into one or similar. Shared facility is use for the most public programs to allow the affordability.

Less electrical equipment will be used, including one vertical transportation system for a 10m-drop site. Ramps are a must in case of emergency, using this as an emergency as well as path source of entry helps minimised corridor space. Shutters will be the main feature in making the units more environmentally friendly and adjustable, as well as green roofs and light wells.

They are able to live a life without the feeling of voyeurism. Affordability isn't always necessity about having the lowest cost. This proposal may give people the oppunity to work full time in the future.
